

Emergency Medicine: Open Access

Open Access

www.omicsonline.org

Emergency medicine is a medical specialty in which physicians care for patients with acute illnesses or injuries which require immediate medical attention. Emergency medicine physicians diagnose a variety of illnesses and undertake acute interventions to stabilize the patient.

Emergency medicine is an Open Access, peer-reviewed online journal which aims to publish the original research, reviews and short articles in the field of emergency medicine which are easy to access and freely available.

Emergency Medicine under the open access category is much more improved than the traditional publications. It allows the free, faster and unconstrained access to the scientific research and their results. The scientists, who needs change (or) are excited about the changes, now prefer the open access journals/ publications than the routine to magnify and pass around their knowledge. It is a multidisciplinary journal that aims to keep scientists, clinicians, researchers, students and general public to know and to spread the latest research on Emergency Medicine.

Emergency Medicine: Open Access uses online manuscript submission, review and tracking systems for quality and quick review processing. Submit your manuscript at
